

Electrical Machines I - Transformer Core Designs Complete

SomaShare Vault • Lecture Notes • EET 300

Unit: Electrical Machines I Kenyatta University

Topics covered:

1. Magnetic circuits and core materials
2. Transformer construction: core vs shell types
3. Eddy current losses and lamination design
4. Hysteresis loops and Steinmetz equation
5. Winding arrangements and insulation
6. Worked examples from past KU exams

Contributed by a fellow KU peer via shared Drive storage.
